

INITIATE-- Quantum
Duplication/Biological Enhancement
Compound(QDBE) Experiment- 0043

Following the containment breach
involved with Experiment_QDBE-0042,
additional security measures have
been enacted. All samples
involved have been triple-checked.
Redundant containment protocols are
in place.

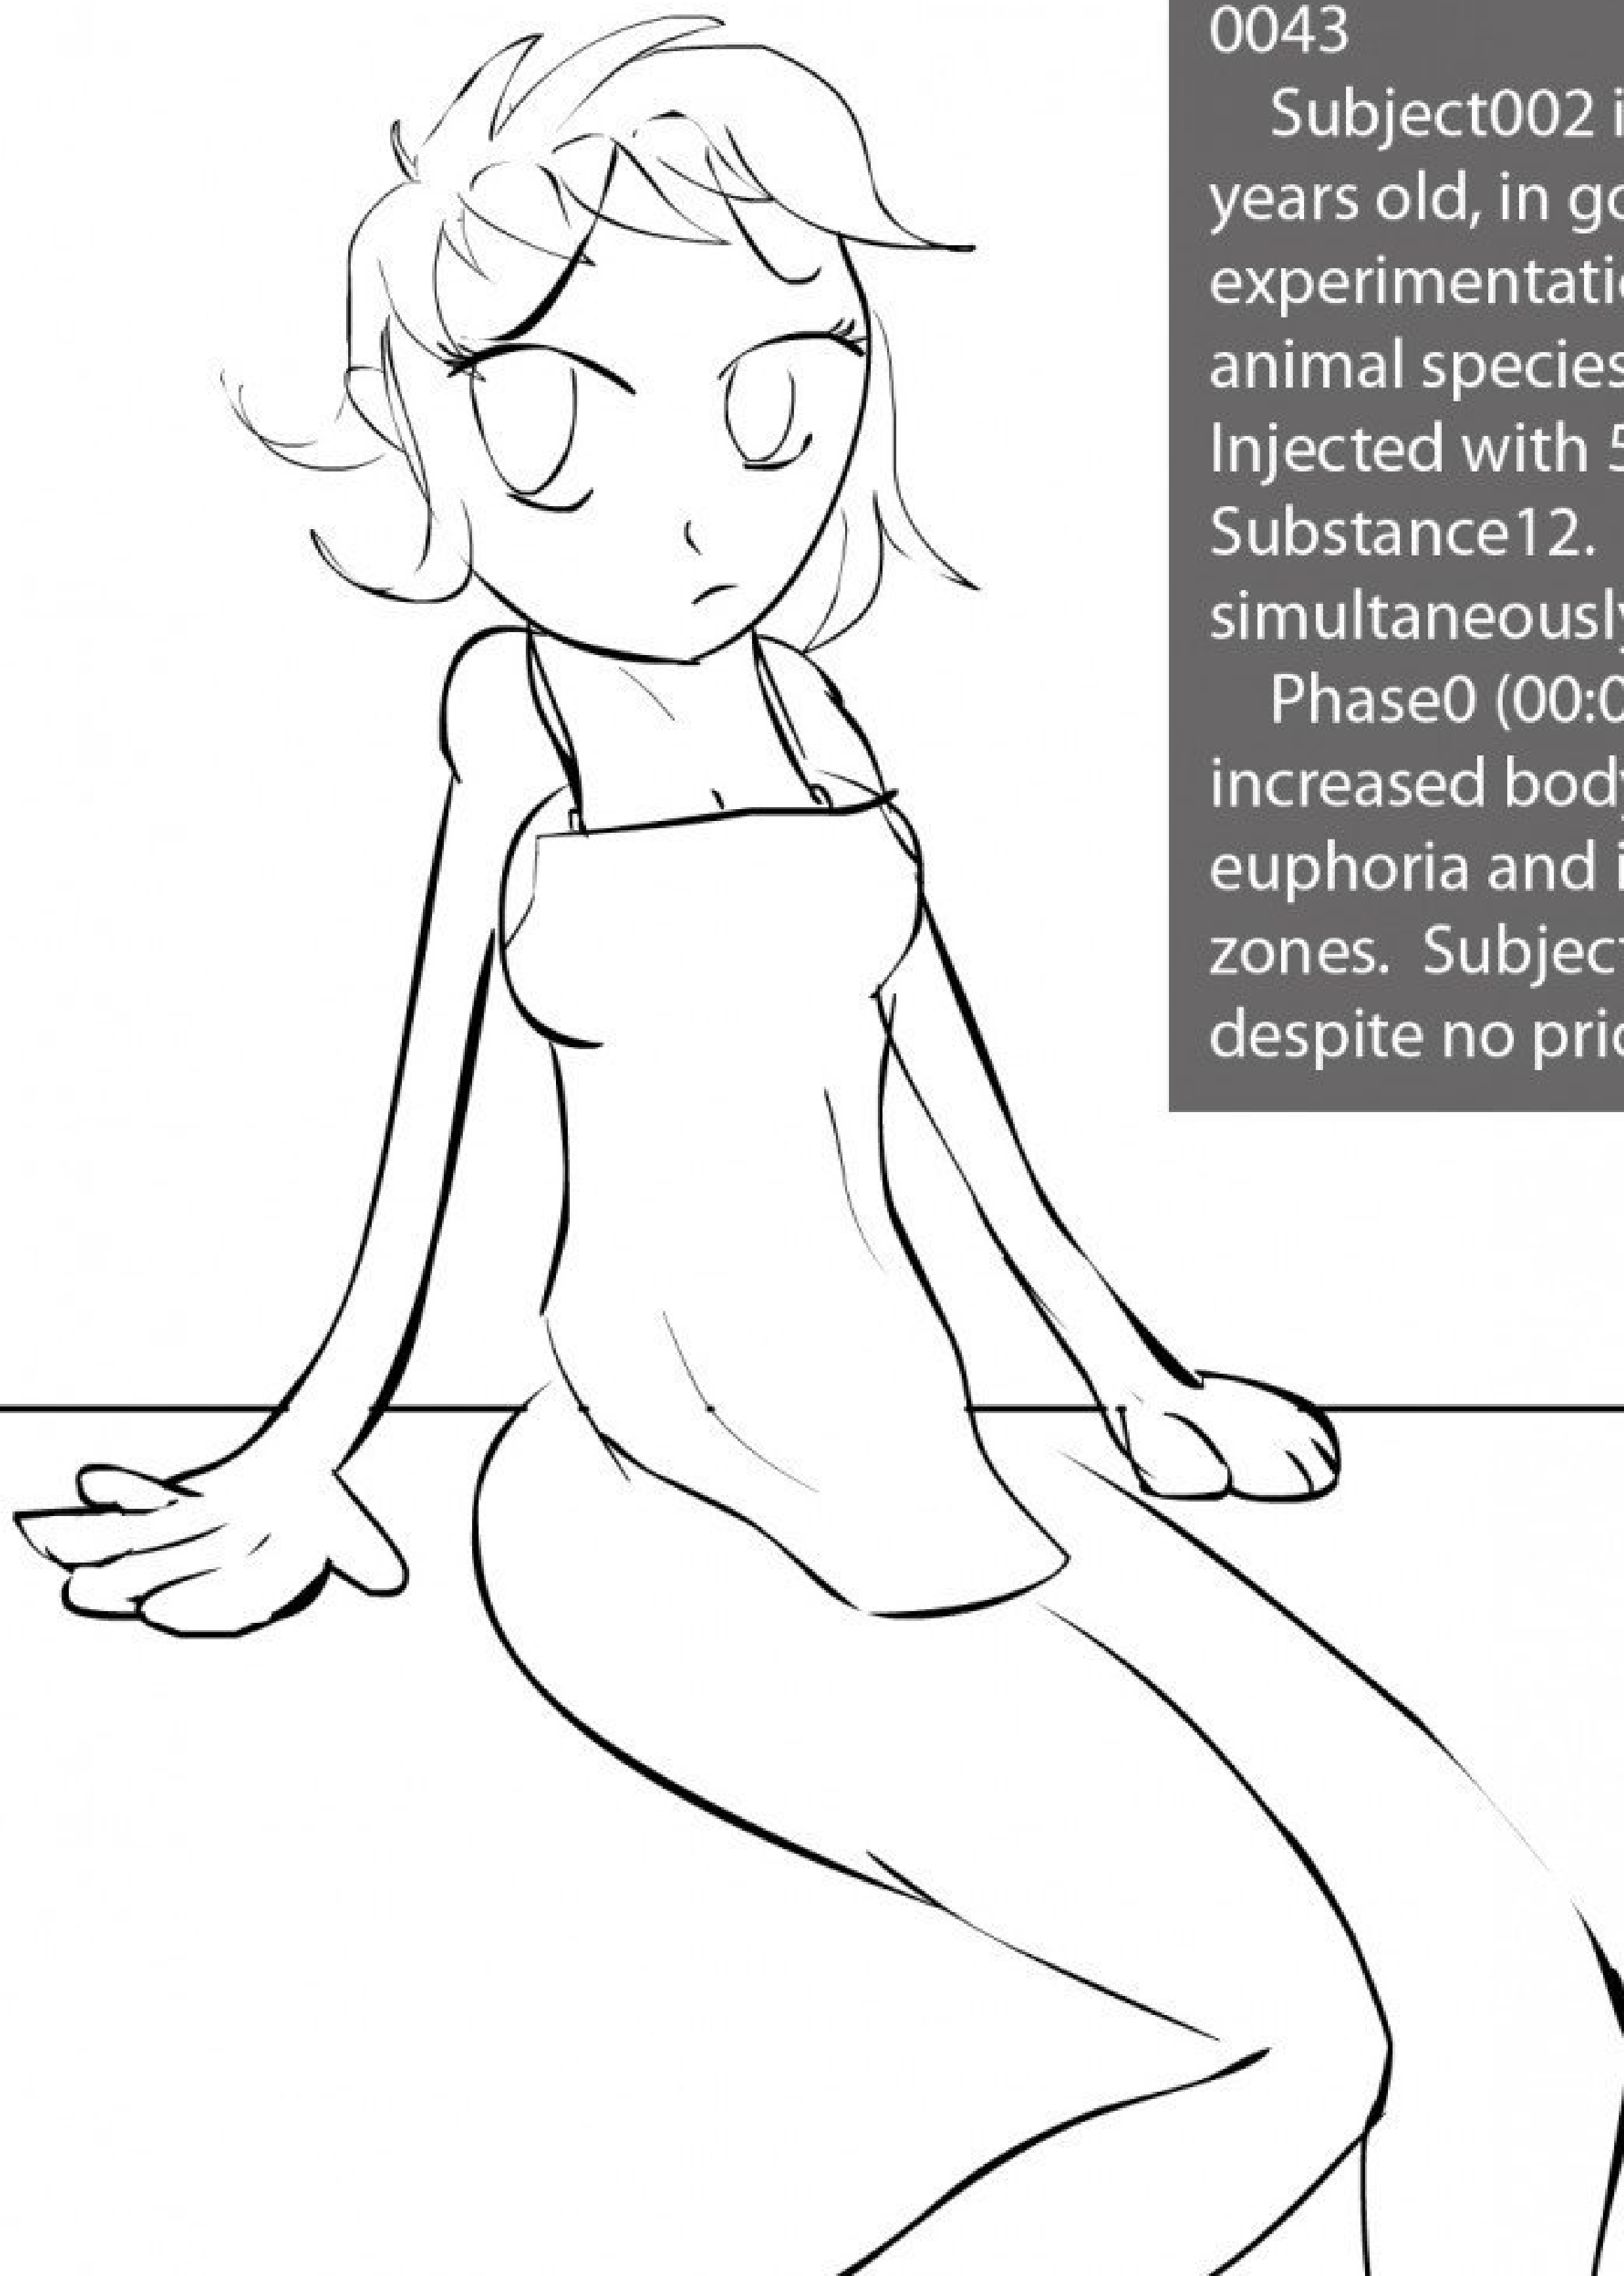

Two(2) subjects injected with
substance12, aka QDBE-compound.
Subject001 is a male western grey
squirrel, species Sciurus Griesus.
Substance 12 is 75% diluted with
water.

Phase0 (00:00-05:00) subject001
shows no outward signs of physical
change. Motions are seemingly
lethargic for species, some signs of
agitation noted.

CONTINUING-- Quantum Duplication/Biological Enhancement Compound(QDBE) Experiment-0043

Subject002 is a female human, eighteen(18) years old, in good health. Volunteered for experimentation when she learned of the test animal species because, "she loves squirrels." Injected with 50% water-diluted dose of Substance12. Subject001 and 002 injections occur simultaneously.

Phase0 (00:00-05:00) subject002 reports increased body temperature and heart rate, slight euphoria and increased sensitivity in erogenous zones. Subject002 also inquires about subject001 despite no prior knowledge or awareness of him.

CONTINUING-- Quantum
Duplication/Biological
Enhancement
Compound(QDBE) Experiment-
0043

Subject001 introduced to
Subject002. Both subjects
display an unanticipated
familiarity and affection for
each other, in a manner
synonymous with an owner and
pet. Olfactory sensors in
enclosure register increased
pheromone activity.
Atmospheric scrubbers func-
tioning properly, containment
is maintained.

Phase1 (05:00 - 08:42) both
subjects display symptoms of
arousal in accordance with their
species. Subject002 appears
temporarily disoriented. Visible
growth occurs in both subjects,
most notably in sexual
attributes.

CONTINUING-- Quantum
Duplication/Biological Enhancement
Compound(QDBE) Experiment- 0043

Observation continues as physical
contact between 001 and 002 is
maintained. Readings indicate that during
contact, samples of substance 12 in
subjects' bodies begin harmonizing, creat-
ing a synchronization between the
biomass of each. Pheromone levels
continue to rise. Containment is holding.

Phase 2 (08:43 - 11:02) Subject 001's mass
begins to convert into a liquified state,
and is then absorbed via some form of
osmosis by Subject 002. This is
hypothesized to be because despite 001's
growth, 002's mass was still much greater.
002 then transformed into an
amalgamation of squirrel and human, as
well as gaining male genitalia.
Subject 002, now dubbed Subject 003,
gained mass in excess to what was
absorbed.

Subject 002, now dubbed Subject 003,
gained mass in excess to what was
absorbed.

CONTINUING-- Quantum
Duplication/Biological
Enhancement Compound(QDBE)
Experiment- 0043

Observation continues as 003's
transformation appears to
conclude, leaving the subject a
squirrel-like humanoid
approximately three(3) meters tall
with exaggerated primary and
secondary sexual characteristics.
Testing of pheromones indicates a
strong mutagenic property that
was also observed in
experiment0042, though at a
greater concentration.

Phase3 (11:02 - 15:00)
Subject003 is observed to be in a
disoriented state, exhibiting greatly
heightened sexual awareness and
libido. Readings indicate a highly
accelerated production of
offspring, and observation reveals
spontaneous parthenogenesis, in
keeping with the results of
experiment0042. Autonomous
pregnancy event occurred much
sooner during experiment0043,
however.

CONTINUING-- Quantum Duplication/Biological Enhancement Compound(QDBE) Experiment- 0043

Subjects004-006 introduced into enclosure. Subject004 is a prepubescent female human age ten(10), Subject005 is a female human age twenty-five(25), and subject006 is a male human age eighteen(18). Subjects004-006 were acquired involuntarily and given no information prior to introduction into 003's enclosure. Triple airlock system is used to preserve containment.

Phase4 (15:00 - 16:08) human subjects display anticipated levels of anxiety towards subject003. Subject003's disorientation dissipates immediately upon becoming aware of other subjects, replaced with obvious signs of arousal. Pheromone levels in enclosure rise by almost 200%.

CONTINUING-- Quantum Duplication/Biological Enhancement Compound(QDBE) Experiment- 0043

Maintenance droids servicing atmospheric scrubbers as per containment protocol have discovered an oily substance surmised to be condensed pheromone substance from subject003. Maintenance droids malfunctioned shortly after discovery, and video feed is down. Redundant backup scrubbers online. Containment holding.

Phase5 (16:08 - 17:44)
Subject003 begins to masturbate, presumably in response to the presence of human subjects. Subjects004-006 begin showing signs of transformation similar to subject002. Subject003 increases in size as it reaches orgasm, and human subjects now resemble smaller instances of 003, transforming into clones, exhibiting similar euphoria and arousal. Despite the hypertrophic nature of its climax, the original 003 remains aroused, its pregnancy seeming to have accelerated due to its orgasm.

CONTINUING-- Quantum Duplication/Biological Enhancement Compound(QDBE) Experiment- 0043

Pheromone density has reached critical levels as the original 003 begins to give birth and the transformed instances are also beginning to secrete their own pheromones. Density thickness has reached visible levels. Ventilation into atmospheric incinerator initiated. Containment is holding.

Phase6 (17:44 - 18:30) Original 003 (heretofore referred to as 'alpha') goes into labor, birthing eight(8) offspring, which resemble feral versions of 003. Alpha undergoes another growth spurt, reaching a height in excess of ten(10) meters, prompting the activation of enclosure expansion mechanisms. Secondary 003's, now dubbed betas, initiate parthenogenesis as they engage in sexual activity together.

CONTINUING-- Quantum Duplication/Biological Enhancement Compound(QDBE) Experiment- 0043

Surveillance equipment showing signs of degradation despite accomodating for pheromone cloud density. Hypothesized mutagenic property of pheromones has evolved or is evolving to affect inorganic materials. Phase plasma projection fields in place to prevent further contamination. Containment is holding.

Phase7 (18:30 - 20:00) Sexual activity between betas has resulted in expediated growth/maturation. Betas have fully transformed into clone-instances of Alpha. While not yet as large as alpha, they will reach "adulthood" faster than original subject003. Alpha predictably begins lactating in large quantities after offspring are born. Said offspring, dubbed gammas, experience observably-accelerated growth after ingesting alpha's milk.

**CONCLUSION-- Quantum
Duplication/Biological Enhancement
Compound(QDBE) Experiment- 0043**

EMERGENCY

**unprecedented psycho-mimetic properties
discovered in subjects of
experiment_QDBE_0043. Containment failing.
Staff quarantined. Failsafe chrono-spatial funnel
engaged. Stasis cube locked down. Automated
records sealed.**
